

IPL group | Environmental Policy

IPL group (comprised of Innovative Products Ltd & OMNI Instruments Ltd) is a customer-focused, innovative, value-driven organisation that designs, manufactures and supplies infrastructure products, services and solutions to customers worldwide. High-quality innovative products, creative engineered solutions, excellent customer service and socially responsible business practices define the organisation since its establishment in 1975.

Environmental leadership and design is a key component of IPL group business operations, products and service. We strive to find a balance between economic, social and environmental concerns. Our reputation for sustainable infrastructure solutions reflects this goal and our environmental policy expresses our commitment to environmental protection – minimising adverse environmental impacts, increasing energy efficiency, preventing pollution, reducing waste, recycling and reusing materials where possible. Under senior management leadership, Health & Safety, Quality and Environmental control is built into an Integrated Management System (IMS) that is designed to ensure that customer and applicable statutory and regulatory requirements are identified, understood and consistently met.

All IPL group defined crucial processes operate within the IMS framework and our established and certified Environmental Management System (EMS), in accordance with ISO 14001:2015 standard. Our EMS has grown with the development of the organisation and is based on: assessment of risk and opportunity; implementation and measurement of environmental objectives, with the aim of continual improvement; and promotion of sustainable solutions and best practice. As such, our EMS applies to daily activities and is a trusted means of achieving IPL group's strategic goals. It is within this context that policy is reviewed, updated and scope of certification aligned with our core business: "design, manufacture, supply and service of infrastructure products for utilities, environmental and industrial sectors".

In summary, the Board of Directors, Senior Management and Staff of IPL group commit to our EMS and policy. We aim to:

- Provide consistent good planning by management whereby we set, check and update objectives and measure the effectiveness of the EMS against legal compliance, customer requirements, external review for certification and internal audits, always with the aim of improved environmental performance in order to minimise adverse environmental impacts, increase energy efficiency, prevent pollution, reduce waste, and to recycle and reuse materials where possible.
- Implement risk-based thinking and emergency preparedness, analyse key activities and opportunities, show evidence-based decision-making in which all IPL group critical processes are established, documented, resourced appropriately and monitored to meet intended results.
- Promote mutually beneficial relationships with all interested parties, customers and suppliers to better understand requirements and interdependent processes that promote sustainable development and improved environmental performance.
- Use qualified consultation, build IPL group team competency levels and support individual expertise and professional experience through recruitment, mentoring, personnel training, skill development and promotion.
- Expand on our record of sustainable infrastructure design whereby all IPL group personnel advance the organisation's strategic objectives whilst being aware of and responsible for the efficient use of materials and energy and compliance with environmental standards, legislative, regulatory and customer requirements.
- Ensure our EMS and policy is applicable to the jurisdictions in which we operate and that it is communicated, understood and applied by all relevant parties, reviewed annually, amended and re-issued as necessary.
